DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 2, 4-6, and 13, drawn to a method of making a semiconductor wafer having a porous adhesive sheet, classified in class 156, subclass 290.
 - II. Claims 7, 9-11, 14, and 15, drawn to a method of making a porous adhesive sheet, classified in class 428, subclass 98.
2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require the particular method of forming the porous adhesive sheet. The subcombination has separate utility such as in clean room applications (see Arimatsu- JP 2003260017) and applications dealing with cabinets (see Watanabe- JP 59145273).
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Art Unit: 1733

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
